

Ali Ammar Hussain

Senior Software Engineer

✉ aliammarhussain1122@gmail.com ☎ +923086612077 📍 Lahore, Pakistan

Profile

Senior Software Engineer with **5+ years of experience** building **scalable, production-grade web platforms** for international clients. Proven track record of leading teams, designing RESTful and event-driven systems, and delivering high-impact products in **e-commerce, healthcare, automation, and SaaS domains**. Experienced in **Node.js, Vue.js, Supabase, workflow automation (n8n)**, and API integrations, with growing focus on **system design, performance optimization, and AI-enabled workflows**.

Professional Experience

Senior Backend Developer, Worktech - Developing and maintaining scalable backend services using Node.js - Building secure RESTful APIs and handling complex business logic - Implementing role-based access control (RBAC) and integrations - Collaborating with frontend and product teams on core features	05/2025 – Present
Team Lead - Vuejs & NodeJs, OutsourceNZ - Led a 11 member engineering team delivering multiple production SaaS platforms - Designed backend architecture using Node.js, supporting thousands of active users - Improved API response times by ~30% through query optimization and caching - Owned full delivery lifecycle: requirements → architecture → deployment - Mentored junior developers and enforced coding standards	02/2022 – 05/2025
Backend Developer, SSP - Developed and maintained backend services and RESTful APIs using Node.js and Express.js - Implemented secure authentication, authorization, and core business logic.	06/2021 – 04/2022
Associate Software Engineer, Devsinc - Contributed to full-stack web applications using MongoDB, Express.js, React.js, and Node.js - Developed and consumed RESTful APIs and implemented core frontend and backend features	01/2021 – 06/2021

Education

BS Software Engineering, Punjabi University College of Information Technology	2017 – 2021 Lahore
FSc Pre-Engineering, Superior Group of Colleges	2015 – 2017 Lahore

Skills

Backend & APIs

- Node.js, Express.js, REST APIs, Socket.io [↗](#)
- Authentication (JWT, OAuth)
- Role-based access control (RBAC)

Database

- MongoDB, PostgreSQL / Supabase
- MS SQL, Oracle
- Data modeling & query optimization

DevOps & Tooling

- Git, GitLab CI/CD
- Linux servers, deployment pipelines

Frontend

- Vue.js, React.js
- HTML5, CSS3, JavaScript (ES6+)
- Responsive & component-based UI

Automation & Integrations

- AI Workflow Automation (n8n, LLM integrations)
- AI-powered API Integrations & Automation
- Third-party Integrations (Stripe, Shopify, Google, Microsoft Outlook, Facebook, WhatsApp, Instagram)
- AI-driven Process Automation & Data Workflows

Projects

DOMINIQX - AI-Enabled Construction Project Management Platform

Built a construction management system for handling sites, projects, tasks, and workflows, with AI-assisted features for task guidance, prediction, and operational insights.

Hydraulics - Engineering Calculation Tool

Developed an intelligent calculation system that automates complex hydraulic and pump performance formulas, enhanced with AI-driven assistance to support mechanical engineers in system design, optimization, and decision-making.

Moxxi – Workflow Automation (n8n)

Designed and optimized advanced n8n workflows integrating Supabase, Asana, chat platforms, and custom APIs to automate business processes and improve operational efficiency.

Tint Sprint – Window Tinting Estimation Tool

Built a responsive cost-estimation platform using Node.js and Vue.js, enabling contractors to generate real-time pricing, manage materials, and export client quotes.

Smart Kids - Educational E-commerce Platform

Developed frontend and backend features for a large-scale e-commerce platform offering 600+ educational products, integrating Shopify, search/filtering, and payment workflows.

Premium Meals - E-commerce Platform for Meat Vendors

Built a full-featured e-commerce system for meat vendors with inventory management, secure online payments, and scalable order processing using Node.js and Vue.js.

Locum Bridge - Medical Locum Job Board

Developed a healthcare job platform with job postings, availability sharing, smart matching, and Google/Outlook calendar integrations.

Vagahau - Language Preservation and Learning Platform

Contributed to a cultural and language preservation platform by building scalable APIs and responsive UI components with multimedia content and user progress tracking.

Hiredawl - Online Marketplace for Services

Built a service marketplace enabling providers to list services and clients to book and pay securely via Stripe and GoCardless, with region-based filtering.

Boatsman IQ - Boat Service Marketplace, *Created as a web-based platform connecting boat owners and service providers to streamline their maintenance affairs. The platform simplifies vendor lookup with streamlined tracking, secure payments, and service management tools.*

Developed a booking and payment platform for boat services, including admin tools, service management, and secure transaction handling.

IMZ International – Media Data Migration System

Implemented data import and transformation pipelines converting CSV, XML, and SQL data into structured MongoDB collections using Mongoose.

Sales Prediction System - Sales Forecasting Tool

Built a machine-learning-based sales forecasting system using Python to analyze historical data and predict future sales trends.
